

AIP Journals Dominate the Field of Applied Physics, New Data Shows

- 4 journals in applied physics published by the American Institute of Physics (AIP) produced **more than a quarter of the total articles in the field** in 2008
- Garnered nearly half of all the cited references in the category
- Constitutes only **4%** of the titles indexed in this category by **Thomson Reuters**.

*These figures were released last week by Thomson Reuters in the 2008 Journal Citation Reports, Science Edition (JCR).

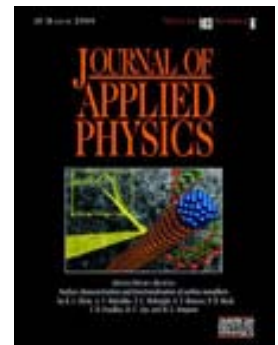

Two AIP Journals were ranked as the first and second most highly cited journals in their category:

- #1 most highly cited of the 95 journals Thomson Reuters in 2008
- Recorded 179,925 citations

- Since first issue of JAP in 1931, these publications have covered important breakthroughs in applications of physics to all branches of science, engineering, and technology.

- Tallied 113, 773 citations in 2008

"In the last 10 years, AIP journal content has grown by more than 60%, thanks in no small part to Applied Physics Letters and Journal of Applied Physics. The publications rank as the second and third largest science journals in the world - as indexed by Thomson Reuters - producing an impressive combined total of more than 9,500 articles in 2008. These rankings are perhaps even more impressive when you consider that more than 6,500 journals are indexed in Journal Citation Reports. I would like to take this opportunity to pay tribute to our authors, editors and referees and thank them for their contribution in making AIP journals the world-class titles they are."

~John Haynes, AIP's Vice President, Publishing

"It's clear from the new citation figures that a large number of researchers across a broad range of disciplines are building upon the work published by AIP journal authors. Our high citation rankings come as no surprise, as AIP journals count many of the top researchers in their respective fields as editors, editorial board members, and in particular, as authors and referees. As a result, we fully expect AIP journals to maintain the leading position as vital sources of information for applied physics researchers around the world."

~Mark Cassar, AIP's Acting Publisher
