

Know More.  
Search Less.

What Knovel users  
are saying

*"One search of Knovel provided me with information which I and others had been looking for.*

*If I had looked here before, it would have saved me months of work. The company is employing external consultants to find the information I found here in 30 minutes."*

*"Legacy aircraft platforms require innovative solutions to provide continuing availability and upgrade to capability. Knovel provides a continuing source of candidate ideas and relevant information."*

**Engineers at seven of the top 10 Aerospace & Defense companies in the world**, among others, tap Knovel when they seek best practice information on a wide range of product development topics including material selection and tolerances, heat transfer and thermodynamics, adhesion, coatings, vibration, environmental impacts and energy efficiency.

New technologies and complex systems consistently stretch the training and expertise of engineers working for Aerospace and Defense companies. To be successful, engineers require ever more interdisciplinary know-how as they participate on teams that are leaner and less specialized. Knovel delivers the answers engineers need to develop innovative and better performing products in less time.

Best-in-class engineering companies incorporate Knovel into their information strategies to help engineers save time, avoid costly mistakes, integrate information into their workflows and expand their knowledge bases. The ability to get the most out of the talent they rely upon is what separates these companies from competitors. With a decade of experience, Knovel understand the types of problems that engineers face, and the information they typically need for resolution.

With validated reference data sourced from more than 70 recognized societies and publishing partners, Knovel offers an unmatched depth and breadth of validated engineering content. Building upon years of accumulated data, Knovel has created Aerospace & Defense Essentials, a package providing vital reference information to help engineers in the Aerospace & Defense industries complete their work.

Aerospace & Defense Essentials enables companies to jumpstart their use of Knovel, so that engineers can easily access content that many top firms in the industry already have and frequently use. Strategically selected from the 23 total subject areas Knovel offers, Aerospace & Defense Essentials includes six subject areas:

- Mechanics & Mechanical Engineering
- General Engineering & Engineering Management
- Electrical & Power Engineering
- Electronics & Semiconductors
- Aerospace & Radar Technology
- Nanotechnology
