

e-researchCenter – your fastest way to Standards and technical regulations

Standards searching could be easy. Just 2 clicks to a Standard – this was the goal of developing e-researchCenter as the new, “state-of-the-art” platform for Standards retrieval. e-researchCenter is the Intranet based solution for Standards. Fast, intuitive access to Standards – from one user up to a user group or a corporate Intranet of multinational companies. e-researchCenter needs no training. The user interface is easy and intuitive and meets expectations of today's WEB based search engines.

e-researchCenter – CD and DVD bye, bye ...

Users just need their browser to access Standards. No other software on the client workstations, no installations (just a PDF Reader). Administration of the server and updates of Metadata are centralized on the Intranet-Server for all users. No time-consuming processes on the client-PCs installing monthly updates.

e-researchCenter is very fast!

Please check the demo version on the Internet. We can provide you with username and password for the trial access. Again, no installations needed. Just use your browser to navigate in the e-researchCenter.

e-researchCenter – Perinorm compatible

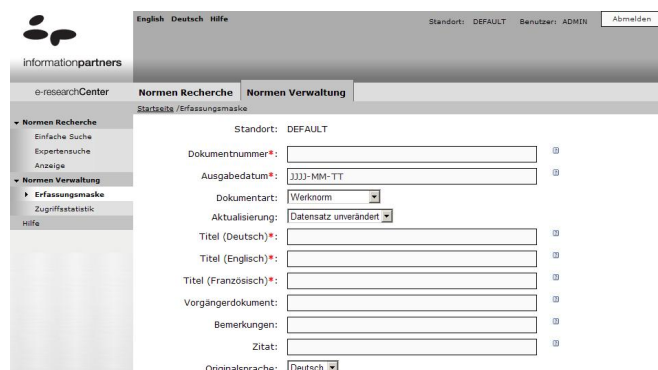

e-researchCenter allows import of Metadata directly out of Perinorm (Export License is necessary). When updates are delivered it is simple and easy to update your Intranet solution. Just export Perinorm data and import into e-researchCenter and allow users to access – done! We even provide this service as an add-on service to e-researchCenter and you will receive the data in the e-researchCenter data format.

e-researchCenter – NormCD compatible

e-researchCenter is able to access fulltext images of NormCD. Users see an icon for each fulltext document available in their subscription. A simple click open the PDF. It's easy for the Administrator. No circuitous process is necessary. e-researchCenter is using the installation on the server. e-researchCenter allows import not „only“ the Perinorm data, but also other bibliographic sources. An add-on integration tool allows to import your own Standards collection or to capture other single Standards and regulations.

e-researchCenter – makes Standards management easy

A detailed rights management allows to identify user groups and locations. With an optional feature individual Standards and regulations can be integrated and each company location can manage their own collections. The user interface can be changed for each location.

e-researchCenter – open for the World of Standards and Regulations

e-researchCenter offers more options to integrate references, for instance from: ASTM, ITU, ETSI, VDE... Just ask us!
